Localization of protein disulfide isomerase in the endoplasmic reticulum of sensory neurons. We have localized protein disulfide isomerase (PDI) to the endoplasmic reticulum (ER) of the soma and axon hillocks of cultured dorsal root ganglion (DRG) sensory neurons by indirect immunofluorescence using antibodies against a peptide from the redox-active thioredoxin domain of human PDI. In addition, we demonstrate a comparable distribution of PDI in cultured primary afferent neurons of the trigeminal nucleus caudalis. Double immunofluorescence using antibodies to ER-resident proteins further reveals that the PDI-like immunoreactivity is highly concentrated in the endoplasmic reticulum of some sensory neurons, but is also
