We can use this result to prove that the set D of decidable sets with decidable intersection property has measure 1. Fix a decidable set A with decidable intersection property and let F be the preimage of A under the map $t \mapsto A \cap \{t\}$ from $\mathbb R$ to D. Since the map $t \mapsto A \cap \{t\}$ from $\mathbb R$ to D is an injective function, F is a proper subset of $\mathbb R$. Therefore, $|F| = |\mathbb R| = \aleph_0$. We prove that F is decidable. To this end, we represent any point x in $\mathbb R$ by a decimal expansion $$x = 0.\underbrace{00\ldots0}_{n\text{ times}}x_1x_2\ldots$$ Consider the following algorithm. We can modify this algorithm to obtain a decidable subset F' of F with the following property: For any two reals $x,y\in F'$, the decimal expansion of x can be obtained from the decimal expansion of y by replacing finitely many n's with 0's.

The existence of a decidable subset F' of F with this property follows by the standard transfinite recursion argument. Let n be the minimum number such that for any two $x,y\in F$ with $|x-y|$
